

Canola Program | 2026 & 2027

Built to support farm legacies and consumer demand

Understand your program choices and deadlines. Availability may be limited, first come first served.

Canola Premiums

Each canola field in the operation receives a score

Production may qualify for multiple premiums based on field-level practices that impact score

Canola deliveries from all accounts in the operation are combined together, then allocated to eligible production at each premium category (highest rate filled first)

One entity/account (that you designate) will be paid

Score Range <i>g CO2e/bu</i>	Premium <i>\$/MT</i>	Cover Crops	Tillage	Nitrogen Use
10,000 or Lower	\$3.08	High % Acres	Low Soil Disturbance T-DISC Score*	High Yield per lb N applied
10,001 or Higher	\$2.20 <i>guaranteed premium</i>	Low % Acres	High Soil Disturbance T-DISC Score*	Low Yield per lb N applied

*Tillage practices will be evaluated using the T-DISC methodology, with soil disturbance thresholds determining eligibility for sustainability scoring. Fields with a T-DISC score ≤ 0.075 will qualify as No-Till, while fields with a score of ≤ 0.252 will qualify as Reduced Till. To receive the full Sustainability Scoring benefit for No-Till acres, fields must be managed under No-Till practices for at least four of the next five years.

Delivery Requirements

ADM Delivery Locations are Subject to Change

Canola must be:

1

Sold directly to ADM

2

Delivered to an ADM location listed below

3

Delivered during the program delivery window

2026 Program Delivery Window

September 1, 2026 - August 31, 2027

North Dakota

Velva

2027 Program Delivery Window

September 1, 2027 - August 31, 2028

How It Works

1. Field Scoring

You work with Gradable to upload field/program information so they can score each field.

2. Eligible Production Summary

Using the information you provide, Gradable determines how much production qualifies within each score range.

3. Delivery Tracking

You work with ADM to identify the accounts that deliver grain from your fields.

4. Delivery Allocation & Payment

ADM tracks eligible canola deliveries and allocates them toward the amount of production qualifying under each premium category, based on field scores.

When production qualifies for multiple premiums, the highest-paying premium is allocated first to maximize your payment.

Payment is made to one designated entity for all eligible production.

- A small subset of farmers will be selected for an on-site interview and compensated \$1,000.
- Acres enrolled in another program receiving private funding are not eligible for incentives.

Data Collection Partner

Field boundaries must be submitted to Gradable for all canola acres. If any acres are participating in another privately and/or publicly funded carbon or sustainability program, those acres must be clearly identified to determine incentive eligibility under the ADM re:generations program.
